1_sb_8: Cy Collectibles

Anish Nukala, Prajwal Chenreddy, Harikrishna Guddati

ACTORS:

Buyer

- Purchase products
- Rate and review sellers
- Chat with sellers
- Edit and manage personal profile information
- Save or add products to favorites

Seller

- Create product listings
- Update active listings
- Delete active listings
- Chat with buyers

Administrator

- Remove listings that violate policies
- Issue warnings to users
- Suspend or ban user accounts

Non-Functional Requirements:

- Search results shall be returned within **1 second**.
- The system shall support a minimum of **4 concurrent active users**.
- The application shall use a **decoupled frontend and backend** architecture to ensure smooth UI performance.
- All user interface elements shall respond within **0.5 seconds**.
- Messaging shall provide a **seamless experience with minimal latency**.
- The system shall be designed to **allow the addition of new features and user types** with minimal changes.

Database Tables:

- **USER:** Tracks information related to a user's account
 - User Id – Primary Key – Unique identifier for each user
 - User Name
 - User Email
 - User Password
 - User Type – Defines role (Buyer, Seller, Admin)
 - Status – Indicates account state (Active or Banned)
 - Flag Count – Tracks number of warning flags issued to the account
- **LISTING:** Stores details about items posted for sale
 - Posting Id – Primary Key
 - Seller Id – Foreign Key to User
 - Date Posted
 - Title
 - Description
 - Price
 - Genre
 - Status –Indicates listing state (Active, Banned, Complete)
- **TRANSACTION:** Records completed purchase transactions between buyers and sellers
 - Transaction Id – Primary Key
 - Posting Id – Foreign Key to Listing
 - Buyer Id – Foreign Key to User

- Seller Id – Foreign Key to User – User selling the item
- Date Bought
- Selling Price– Final price at which the item was sold
- **RATINGS:** Stores feedback scores given by buyers to sellers
 - Rating Id – Primary Key
 - Buyer Id – Foreign Key to User
 - Seller Id – Foreign Key to User
 - Rating – Numerical value representing feedback score
- **FAVOURITES:** Tracks listings saved or bookmarked by users
 - Favourite Id – Primary Key
 - User Id – Foreign Key to User
 - Listing Id – Foreign Key to Listing
- **BANNED LISTINGS:** Records listings removed or restricted by administrators
 - Ban Id – Primary Key
 - Admin Id – Foreign Key to User
 - Posting Id – Foreign Key to Listing
 - Ban Date
- **BANNED USERS:** Stores information about users banned by administrators
 - Ban Id – Primary Key
 - Admin Id – Foreign Key to User
 - User Id – Foreign Key to User
 - Ban Date

Screen Flow Diagram

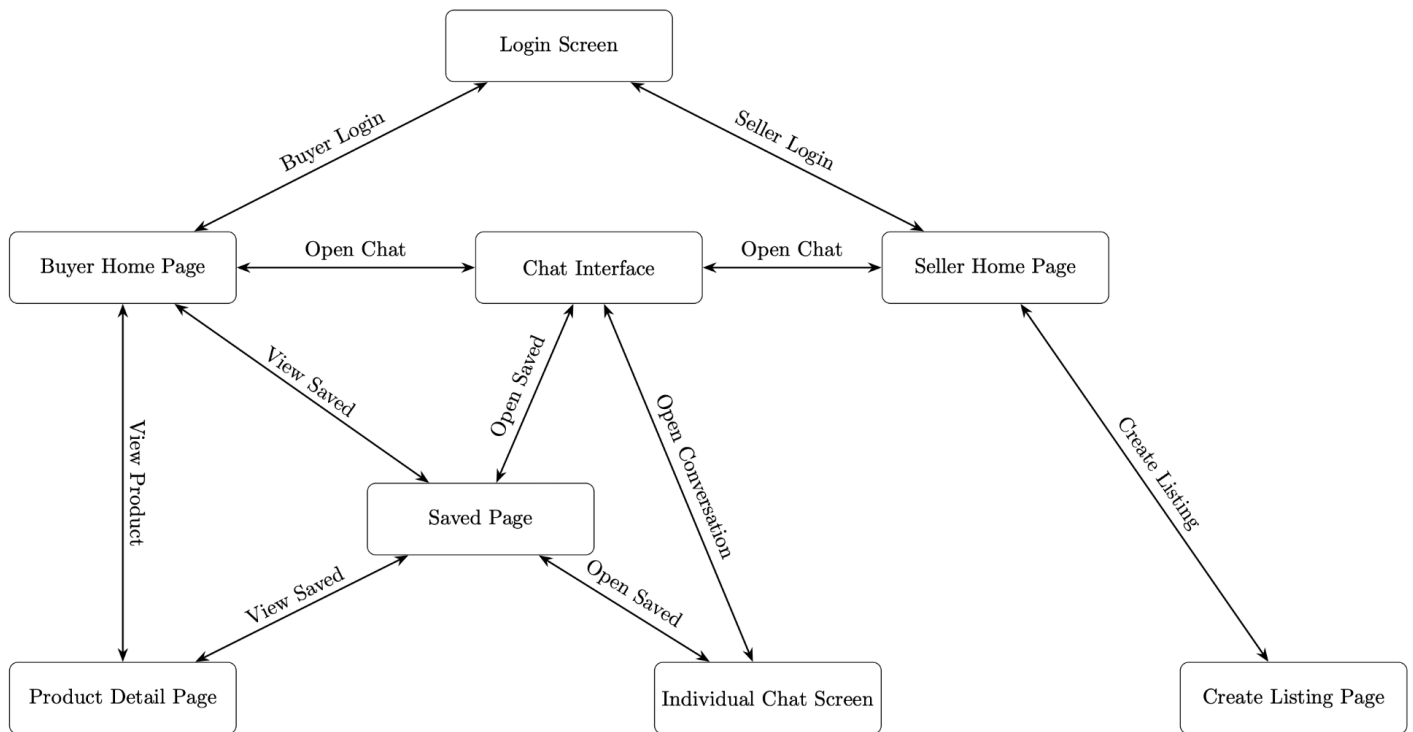

Figure 1: Buyer Home Page (Anish Nukala)

This screen allows buyers to browse, search, and interact with collectible items available within the CyCollectibles marketplace. It serves as the primary landing page after login and provides quick access to filtering, sorting, saved items, messaging, and account management features. The layout is structured to allow users to begin interacting from the top of the page (search and filtering tools) and move downward to browse listed items, while also maintaining persistent navigation at the bottom for seamless access to other major sections of the application.

This screen lets the user access their profile (1), search for collectibles using keywords (2), filter items by category (3), sort displayed results based on selected criteria (4), preview item details through item cards (5), navigate back to the home feed (6), view saved collectibles (7), access chat conversations (8), and review browsing or activity history (9).

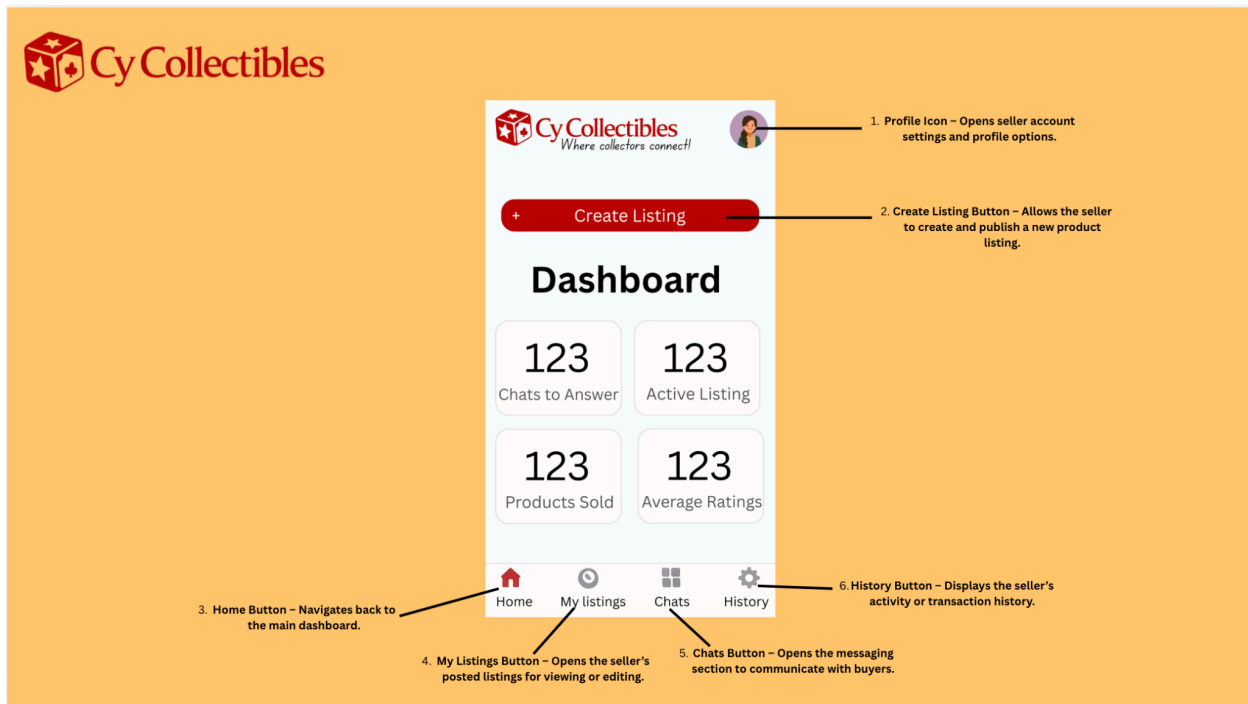

Figure 2: Seller Home Page (Anish Nukala)

This screen serves as the primary dashboard for sellers within the CyCollectibles platform. It provides an overview of seller activity, performance metrics, and quick access to listing and communication tools. The page is structured to prioritize listing management and performance tracking at the center of the interface, while maintaining persistent navigation at the bottom for efficient movement between core sections of the application. This layout allows sellers to quickly create listings, monitor activity, and respond to buyers without navigating through multiple screens.

This screen allows the seller to access account settings (1), create and publish a new product listing (2), return to the main dashboard (3), manage and edit posted listings (4), communicate with buyers through messaging (5), and review transaction or activity history (6). Additionally, the dashboard displays key performance metrics such as chats to answer, active listings, products sold, and average ratings to help sellers monitor their marketplace performance.

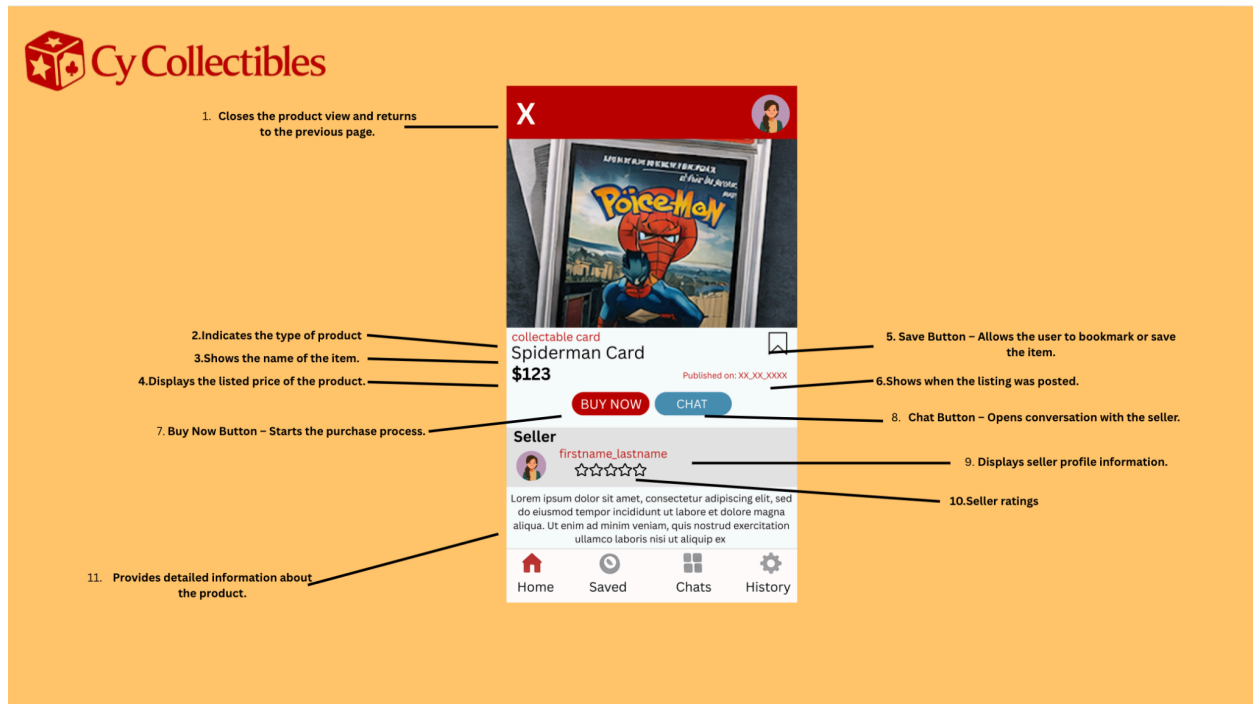

Figure 3: Item Detail Page (Prajwal Chenreddy)

This screen displays the detailed view of a selected collectible item within the CyCollectibles platform. It provides buyers with complete information about the product, including pricing, seller details, listing date, and purchasing options. The page is structured to first highlight the product image and key identifying information at the top, followed by seller information and a detailed product description. This layout ensures that users can quickly evaluate the item and take action, whether that be purchasing, saving, or contacting the seller.

This screen allows the user to close the product view and return to the previous page (1), identify the product type (2), view the item name (3), see the listed price (4), save or bookmark the item (5), view the publication date of the listing (6), initiate the purchase process (7), open a conversation with the seller (8), view seller profile information (9), review seller ratings (10), and read a detailed product description (11).

Figure 4: Chats Page (Prajwal Chenreddy)

This screen displays the messaging interface used by both buyers and sellers within the CyCollectibles platform. It provides a list of ongoing conversations, allowing users to quickly identify active chats and unread messages. The layout is structured to prioritize conversation visibility, with profile icons and usernames clearly displayed for easy recognition. Persistent bottom navigation ensures users can move between core sections of the application without losing access to messaging functionality.

This screen allows the user to close the chat view and return to the previous page (1), access account settings through the profile icon (2), identify unread messages (3), view the username of conversation participants (4), and see the profile icon associated with each chat (5). The bottom navigation bar provides quick access to Home, Saved items, Chats, and History sections.

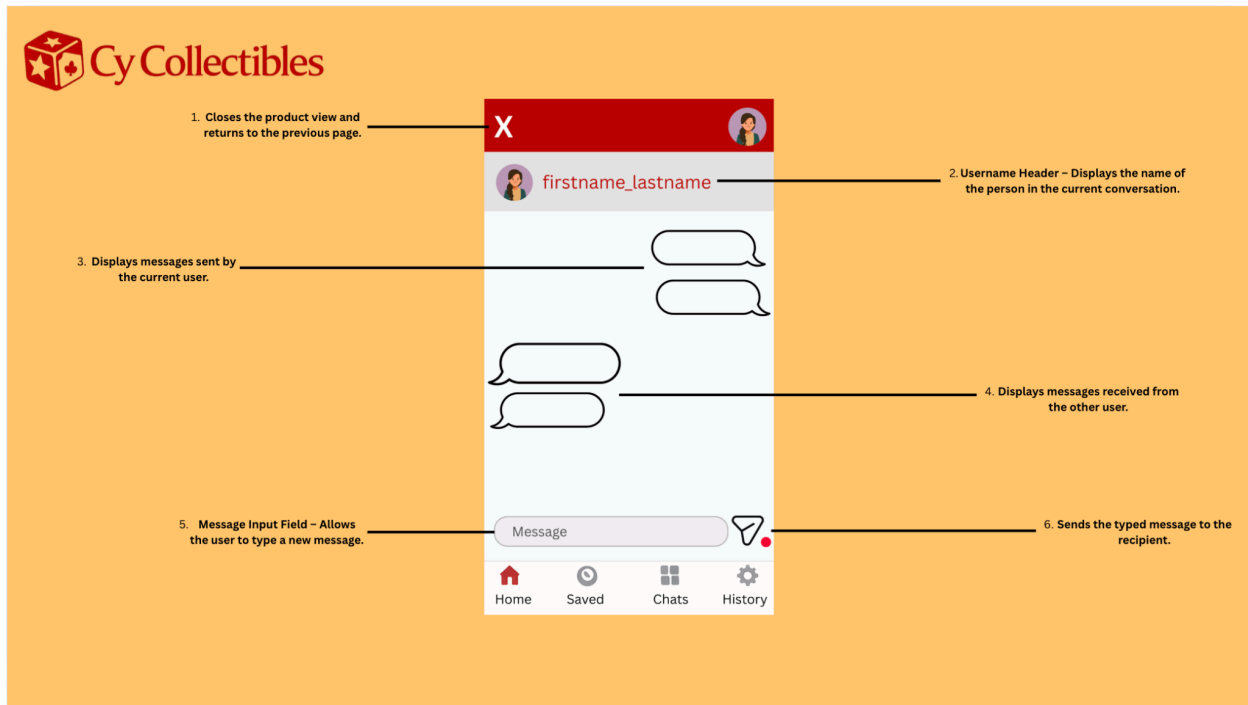

Figure 5: Selected Chat Conversation (Harikrishna Guddati)

This screen displays an active conversation between two users (buyer and seller) within the CyCollectibles messaging system. It allows users to exchange messages in real time regarding listings, negotiations, or purchase details. The layout prioritizes conversation clarity by visually separating sent and received messages. The header displays the conversation participant's name, while the message input area at the bottom allows users to compose and send new messages efficiently. Persistent bottom navigation ensures continued access to other main sections of the application.

This screen allows the user to close the conversation and return to the previous page (1), view the username of the person in the current conversation (2), see messages sent by the current user (3), view messages received from the other user (4), compose a new message using the input field (5), and send the typed message to the recipient (6).

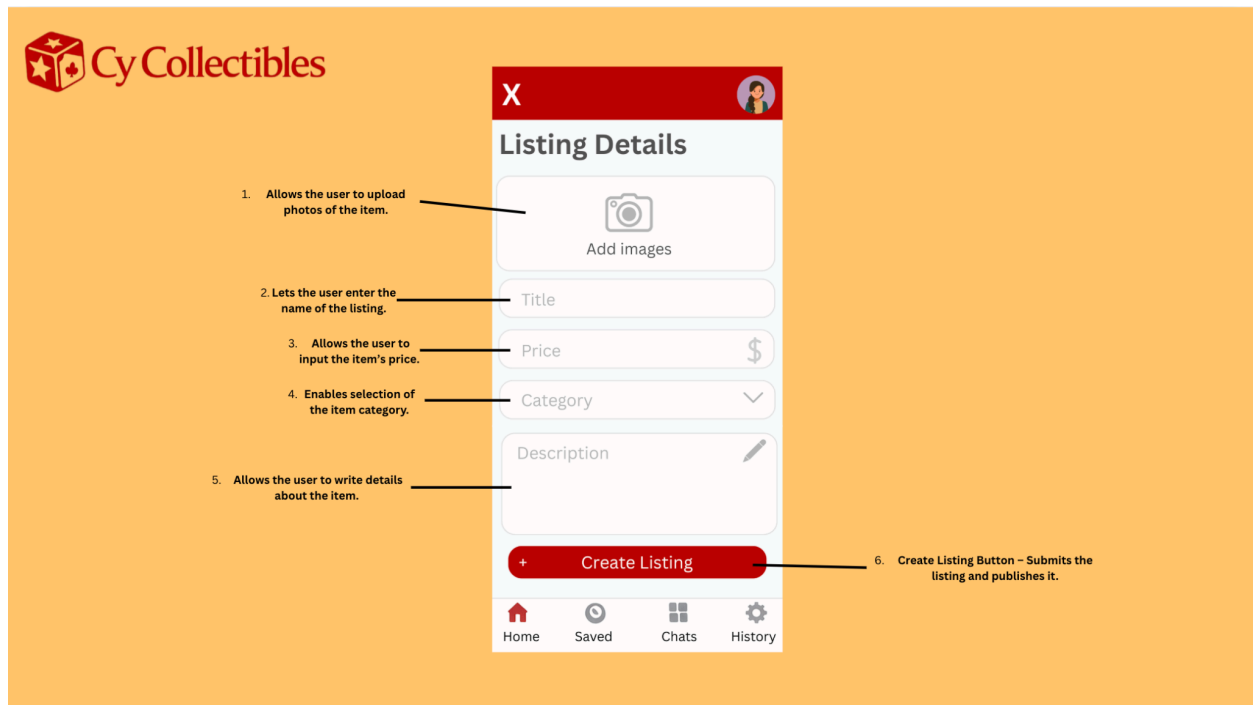

Figure 6: Create Listing Page (Harikrishna Guddati)

This screen allows sellers to create and publish a new product listing within the CyCollectibles platform. It provides input fields for essential listing information such as images, title, price, category, and description. The layout is structured in a top-to-bottom format, guiding the seller through the listing creation process in a logical sequence. After entering all required details, the seller can submit the listing to make it available for buyers in the marketplace.

This screen enables the seller to upload item images (1), enter the listing title (2), specify the item price (3), select a category for the product (4), provide a detailed description (5), and submit the listing for publication (6).
